

HIGHWAY ALPINE CLUB CO-OPERATIVE LIMITED

TARIFF CALCULATION

“That each year the peak season weekly tariff be calculated on the following formula:

- a) the member rate be set based on a reasoned competitive market rate
- b) the non-member rate be set at 40% above member rate
- c) the associate rate be set at 20% above members rate
- d) the child rate set at $\frac{2}{3}$ the adult rate (both member & non-member)
- e) the daily rate is 20% of the weekly rate (both member & non-member)
- f) the early winter shoulder rate 42% of peak rate (both member & non-member)
- g) the late winter shoulder rate 55% of peak rate (both member & non-member)
- h) the summer rate approx 30% of peak winter (both member & non-member)
- i) children under 5years pay approx the daily seasonal rate (both member & non-member)

With each calculated weekly rate rounded to nearest \$5”

“That 6% credit discount be granted to members who book a full week of guests in summer”
